Professional Summary

Android Software Engineer with 3 years of experience building scalable consumer applications, reward-based platforms, and Android SDKs using Kotlin and modern Android architecture. Experienced in developing high-performance Android applications using MVVM, Coroutines, Retrofit, Firebase, and real-time communication technologies. Proven track record of building reward-driven user experiences, Android SDKs, and consumer applications serving millions of users across engagement, monetization, and offerwall platforms. Skilled in analytics, crash monitoring, Play Store releases, performance optimization, and delivering reliable mobile experiences that improve user retention and product growth.

Technical Skills

Languages: Kotlin, Java

Android Development: Android SDK, XML, MVVM, Clean Architecture, ViewModel, LiveData, Coroutines, StateFlow

Networking: REST APIs, Retrofit, OkHttp, JSON Parsing, WebSockets

Firebase: Authentication, Analytics, Crashlytics

Notifications: OneSignal Push Notifications

Monetization: AppLovin, ironSource, Offerwall Integrations

Tools & Platforms: Android Studio, Git, GitHub, Jira, Postman, Google Play Console

Core Expertise: Android SDK Development, Reward-Based Applications, Offerwall Platforms, Real-Time Applications, Performance Optimization, Crash Analysis, Ad Monetization, Play Store Releases

Working Knowledge: Jetpack Compose, Room Database

Professional Experience

Software Development Engineer - 1

Jan 2024 – Jun 2026

Leadmint Technologies, Noida

AdJump Android SDK – Offerwall & Reward Monetization Platform

- Developed and maintained a production Android Offerwall SDK integrated across 8+ consumer applications.
- Built reward-based user journeys enabling users to earn in-app rewards through app installs and campaign-driven actions.
- Implemented offer discovery, click tracking, conversion tracking, and backend validation workflows using Retrofit and WebView.
- Designed event-tracking mechanisms to capture offer interactions and conversion events for campaign measurement and monetization.
- Enabled host applications to distribute rewards through callback-based wallet integration and reward fulfillment workflows.
- Collaborated with backend teams to ensure accurate reward attribution, offer delivery, and user reward synchronization.
- Improved SDK reliability, stability, and integration experience through continuous optimization, debugging, and production support.

Ludo Money – Real-Time Multiplayer Gaming Platform

- Developed and maintained a real-time multiplayer Ludo application supporting 2, 3, and 4-player game modes using WebSockets.
- Implemented matchmaking, game-state synchronization, reconnect handling, and real-time event communication.
- Built wallet-integrated gameplay experiences and user progression systems.

- Optimized application performance and network communication to improve gameplay experience across Android devices.
- Monitored application stability using Firebase Crashlytics and resolved production issues impacting gameplay and user retention.

BrainZ – Gamified Reward-Based Learning Application

- Developed a gamified Android application where users solved mathematics challenges and earned rewards through progression-based gameplay.
- Built levels, achievements, reward systems, and difficulty scaling using Kotlin and MVVM architecture.
- Integrated Firebase Authentication, Analytics, and Crashlytics for user management and application monitoring.
- Implemented reactive UI patterns using Coroutines and StateFlow.

Junior Android Developer

Oct 2023 – Dec 2023

Leadmint Technologies, Noida

- Developed and maintained reward-based consumer applications including RewardX (10L+ downloads), CoinDay (10L+ downloads), MoneyX (1L+ downloads), TaskPlus (1L+ downloads), and TaskWask (1L+ downloads).
- Implemented backend integrations, API connectivity, and new features across multiple production Android applications.
- Built wallet-based user experiences, reward tracking systems, and engagement-driven workflows.
- Integrated AppLovin and ironSource SDKs to support rewarded advertisements and monetization strategies.
- Implemented Firebase Analytics and Crashlytics for application monitoring and user behavior tracking.
- Participated in Play Store deployments, release testing, and production support activities.
- Contributed to the early development and maintenance of the AdJump Offerwall SDK.

Android Developer Intern

Jul 2023 – Sep 2023

Leadmint Technologies, Noida

- Developed Android UI screens and user-facing features using Java and XML for reward-based consumer applications.
- Implemented a Spin Wheel reward feature for RewardX to improve user engagement and reward distribution.
- Built and enhanced application screens for TaskPlus and other Android applications.
- Assisted with API integration, bug fixing, and application testing across multiple projects.
- Collaborated with senior developers to deliver production-ready Android features and improve application stability.

Projects

DukaanDesk – Shop Management Application

- Built a shop management application using Jetpack Compose and MVVM architecture.
- Implemented role-based authentication, billing workflows, inventory management, and sales tracking features.
- Integrated Firebase Authentication and Realtime Database for real-time data synchronization.
- Designed reactive UI patterns using StateFlow and modern Android development practices.

2048 Game

- Developed a modern Android implementation of the 2048 puzzle game using Jetpack Compose.
- Implemented game-state management, undo functionality, and responsive UI interactions.
- Applied MVVM architecture and state persistence techniques.

Education

Master of Computer Applications (MCA)

2022 – 2024

Galgotias University, Greater Noida

Bachelor of Computer Applications (BCA)

2019 – 2022

Integral University, Lucknow
